

## Jump run:

- Head wind, always parallel to the runway, north of centerline
- JM coordinates exits and spacing
- Avoid high ground covering 180° west of DZ

## Openings

- Opening altitude 3500' unless HFL and pilot approves high pull
- Openings and canopy flight north of runway centerline
- Turn north immediately after opening until full control of groups before and after

## Landing pattern

- Keep your place in queue
- Keep spacing
- 900'-600'-300'-pattern
- Final always parallel to runway, right/left pattern pending on direction
